The idea that the language we speak influences the way we think has evoked perennial fascination and intense controversy. According to the strong version of this hypothesis, called the Sapir-Whorf hypothesis after the American linguists who propounded it, languages vary in their semantic partitioning of the world, and the structure of one's language influences how one understands the world.

Greek advances in anatomy. Nomenclature, methods and applications for the study of anatomy all date back to the Greeks. The early scientist Alcmaeon began to construct a background for medical and anatomical science with the dissection of animals. He identified the optic nerves and the tubes later termed the Eustachius.
