Fuels are substances, which, when burned or consumed, produce energy. Fuels in use today are mostly derived from petreoleum. Fuels, which are not derived from petreoleum, are known as alternative fuels, since they provide an alternative source of energy. Alternative fuels include natural gas, propane, hydrogen, biofuels, alcohol and other fuels.

Alternative Fuels: S.S. Thipse: 9788184950786: Amazon.com ...

The Department of Defense (DOD) has purchased small quantities of alternative fuels—jet and naval distillate (known as F-76, to power ships)—for testing and demonstration purposes, but has not done so yet for military operations. DOD's testing process validates the ability of alternative fuels to meet safety, performance, and reliability standards for military equipment and platforms.

Fuels are substances, which, when burned or consumed, produce energy. Fuels in use today are mostly derived from petreoleum. Fuels, which are not derived from petreoleum, are known as alternative fuels, since they provide an alternative source of energy. Alternative fuels include natural gas, propane, hydrogen, biofuels, alcohol and other fuels.

Buy Alternative Fuels Book Online at Low Prices in India ...

Alternative fuels are derived from sources other than petreoleum. Most are produced domestically, reducing our dependence on imported oil, and some are derived from renewable sources. Often, they produce less pollution than gasoline or diesel. Ethanol is produced domestically from corn and other crops.

Alternative Fuels Data Center: Largest U.S. Port Complex ...

Hydrogen, when used in a fuel cell to provide electricity, is an emissions-free alternative fuel produced from diverse energy sources. Currently, drivers of light-duty fuel cell electric vehicles (FCEVs) can fuel up at retail stations in less than 5 minutes and obtain a driving range of more than 300 miles. Research and commercial efforts are under way to expand the limited hydrogen fueling infrastructure and increase the production of FCEVs.

Alternative Fuels Data Center: Hydrogen

E85 (85 percent ethanol alcohol and 15% gasoline) and M85 (85% methanol alcohol and 15% gasoline) currently are the only alternative fuels that have some availability (though limited) because they can be burned in specially-equipped "flex-fuel" vehicles.
