Biomass Briquettes are made from crop waste left over from harvested crops, such as mustard or pulse stalks, rice husks, or even sawdust. In many regions across the world where Biomass waste is not used to make briquettes, the only way to dispose it is to burn it - which causes widespread air pollution.

Download Ebook Biomass Briquetting Technology And Practices

Biomass briquettes are a biofuel substitute to coal and charcoal. Briquettes are mostly used in the developing world, where cooking fuels are not as easily available. There has been a move to the use of briquettes in the developed world, where they are used to heat industrial boilers in order to produce electricity from steam.
