Value and Policy Iteration in Optimal Control and Adaptive Dynamic Programming Dimitri P. Bertsekasy Abstract In this paper, we consider discrete-time in nite horizon problems of optimal control to a terminal set of states. These are the problems that are often taken as the starting point for adaptive dynamic programming.

**Value and Policy Iteration in Optimal Control and Adaptive ...**

We pay special attention to the contexts of dynamic programming/policy iteration and control theory/model predictive control. We also discuss in some detail the application of the methodology to challenging discrete/combinatorial optimization problems, such as routing, scheduling, assignment, and mixed integer programming, including the use of ...
