What Are the Different Types of Fetal Monitoring? Electronic Fetal Monitoring. Electronic fetal monitoring (EFM), also called cardiotocography (CTG), is when the baby's heart rate is monitored with an ultrasound machine while the mother's contractions are monitored with a pressure sensor (Alfirevic et al. 2017). Both of these sensors are linked to a recording machine, which shows a print ...

Fetal Monitoring in Practice , 4th Edition - Mosby

Electronic fetal monitoring is a procedure in which instruments are used to continuously record the heartbeat of the fetus and the contractions of the woman's uterus during labor. The method that is used depends on the policy of your ob-gyn or hospital, your risk of problems, and how your labor is going.

Continuous Electronic Fetal Monitoring

Whether using auscultation, electronic fetal heartrate monitoring, or a combination of the two during different parts of labour, professional guidelines recommend that fetal heartrate monitoring should be continuous during the whole of active labour and increase in frequency in the active second stage of labour.
