Informatica (Version 9.6.1 HotFix 3)

Informatica Transformations are repository Objects that are used to perform aggregations, sorting, merging, modifying, distributing, etc., while passing data through them. The Power Center Designer provides a set of transformations in Informatica that perform specific functions.

Informatica Transformations - Tutorial Gateway

Transformations in Informatica are the objects which create, modify or pass data to the defined target structures (tables, files or any other target). The purpose of the transformation in Informatica is to modify the source data as per the requirement of the target system. It also ensures the quality of the data being loaded into the target.

Data Transformation Getting Started Guide . The Data Transformation Getting Started Guide is written for developers. It provides a tutorial to help first-time users learn how to use the Data Processor transformation. This guide assumes that you have an understanding of relational source files in CSV format, PDF source files, XML source files ...

10.2.1 - docs.informatica.com

Transformations is the operation of converting data from the format of the source system to the skeleton of Data Warehouse. A Transformation is basically used to represent a set of rules, which define the data flow and how the data is loaded into the targets. To know more about Transformation, check out Transformations in Informatica blog.
