The Evolution Of National Water

This paper analyses the evolution process of the national WWM regime and its effect on WWM at the municipal level, and explains the paradigm shift. It is found that both the long-term neglect and the paradigm shift can be attributed to the central government's policies regarding WWM rather than to the local authorities.

During major evolutionary transitions, groups acquire a new body plan that allows them to colonize new habitats and behave in new ways. The evolution of swimming cetaceans from land-living mammals is a prime example. We document changes to the inner ear sensory system, involved in balance and equilibrium, as extinct crocodile relatives called thalattosuchians underwent a similar transition in ...
